

# NOAA's AI Transformation

## Speakers:

Rob Redmon, Director, NOAA Center for Artificial Intelligence

Jun Wang, MLWP project lead, NOAA/NWS/NCEP/EMC

## Contributors:

Monica Youngman, Chief Scientist, National Weather Service/OSTI  
Chair, NOAA Artificial Intelligence Executive Committee

Jacob Carley, Chief, Engineering and Implementation Branch, NOAA/NWS/NCEP/EMC

Isidora Jankov (OAR/GSL), Sergey Frolov (OAR/PSL), Corey Potvin (OAR/NSSL), Chris Slocum (NESDIS/STAR), Douglas Rao (NESDIS/NCEI, CISSESS), NCAI Team

**September 9, 2025**

**3:30-4:00 MT**

# Outline

- NOAA AI Strategy Update
- NCAI Overview
- AI Activities relevant to UFS Community
- Operational Transition
- Discussion

# Why AI for NOAA Mission Delivery?

## MISSION

## PEOPLE

# NOAA AI Strategy Rapid Refresh Goals

To ensure NOAA continues to serve the highest quality earth system prediction, resilience, and intelligence information, it is critical for NOAA to rapidly, effectively, and responsibly leverage AI.

**AI for NOAA's Mission Delivery**

NOAA Center for AI (NCAI)

Administrative Tools  
like Gemini

**Data for AI**

NOAA AI Executive  
Committee (NAIEC)

AI-Ready Data  
(*ML Training Library*)

**Information Technology for AI**

NOAA AI Working Groups  
(NAIWGs)

Workforce Training  
(*Learning Journeys*)

**Workforce Proficiency in AI**

LO AI Projects

Partnerships  
(*CRADAs, MOUs*)

**Robust and Trustworthy AI**

# NOAA Center for AI – High Impact Activities

## Training AI Workflows

## Cloud Sandboxes Engagement

## Workshops

7th AI Workshop *Generative AI  
for Earth and Space Modeling  
and Information Services,*

**Sep 16-17**

[noaa.gov/ai/events](https://noaa.gov/ai/events)

## NCAI Program Office & Tech Hub

**Robust and Trustworthy AI Innovation**  
Why, What, How

**Training**

**AI Data  
Standards**

**Partnerships  
Engagement**

**Communities  
of Practice**

## Connecting Inside NOAA:

Web: [sites.google.com/a/noaa.gov/ncai/](https://sites.google.com/a/noaa.gov/ncai/)

Chat with the [NCAI Community](#)

## Publicly:

[noaa.gov/ai](https://noaa.gov/ai) (e.g. Workshops),

[ncai.team@noaa.gov](mailto:ncai.team@noaa.gov)

## AI-Ready Standards

New Data Governance Activity:  
AI Data WG

AI Ready Data (examples):

- Ocean: World Ocean DB, Sea Surface Temperature, Sea Ice
- Coasts: Offshore Winds
- Land: Temperature T2m

## Generative AI for Admin & Info

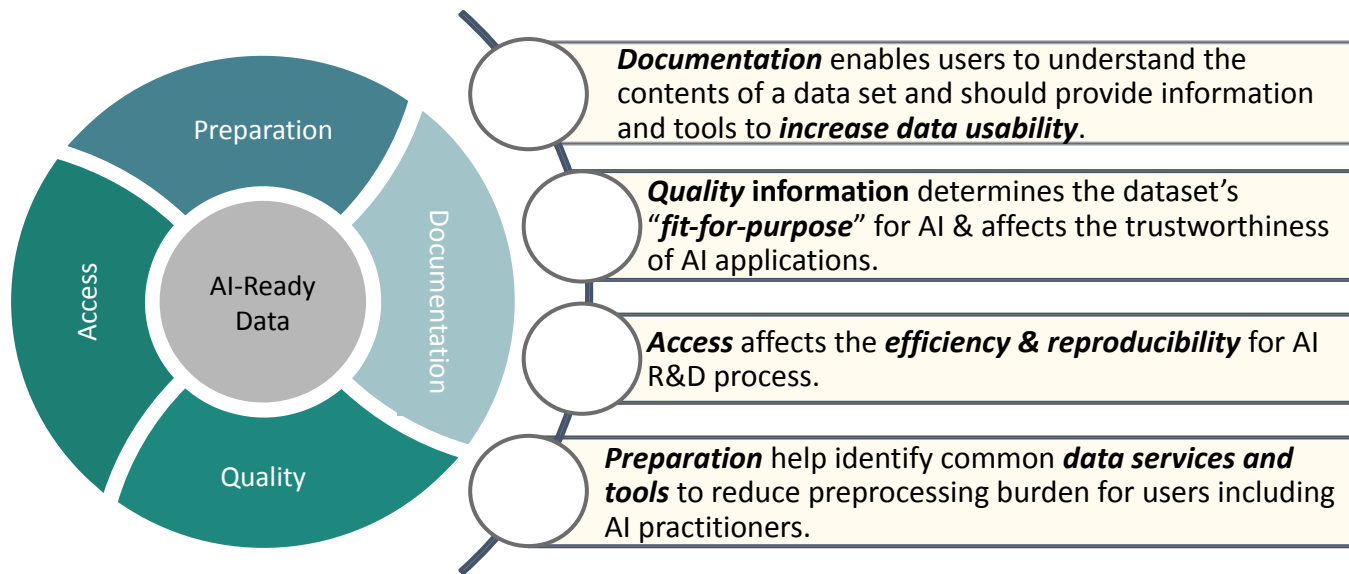

**Gemini**

**slack Pilot**

# AI-Ready Data in Earth and Space Sciences

## Community Resources:

- ESIP Data Readiness  
See GitHub link below.
- NOAA AI Data WG under the Data Governance Committee, contact Douglas Rao, Tyler Christensen, Rob Redmon.

Earth Science Information Partners (ESIP) Data Readiness Cluster (<https://github.com/ESIPFed/data-readiness>) is a forum for community members from agencies (NOAA, NASA, USGS, DOE, USAF, Met Office, etc), private sectors, and academia to:

- Understand users' data needs for AI/ML Research and Development with Earth system science data
- Develop community standards, leading practices & tools for AI-ready data

# AI-Ready Data – Accelerating AI4NWP

## (a) TC PRIMED $TC^9$

Tropical Cyclone PRecipitation, Infrared, Microwave, and Environmental Dataset

## (b) Offshore Wind Profiles

Offshore vertical wind profiles provide valuable coastal knowledge, e.g. for offshore industry siting and coastal weather modeling.

NCAI AI-ready Data and Learning Journeys

# Workforce Training – Responsible AI

Understanding NOAA training needs and gaps

Pilot gap assessment for NOAA AI training needs:

<https://www.noaa.gov/ai/resources>

Facilitating resource development & curation

Published learning journeys:  
Rip currents, tropical cyclones, offshore wind, geomagnetic navigation, ocean acoustics

<https://github.com/noaa-ncai>

Enabling workforce & building competency

Hosting training events / tutorials on AI topics relevant to NOAA missions

*e.g. Thursday September 11  
“Training #4: NOAA AI Learning Journeys Tutorial”*

# AI Activities of Interest

## Nested Applications

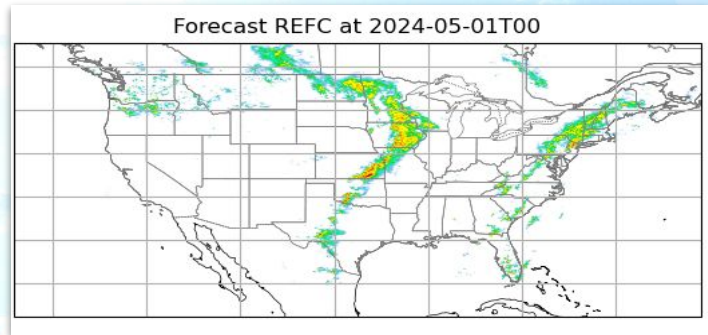

## Global Coupled Ensembles

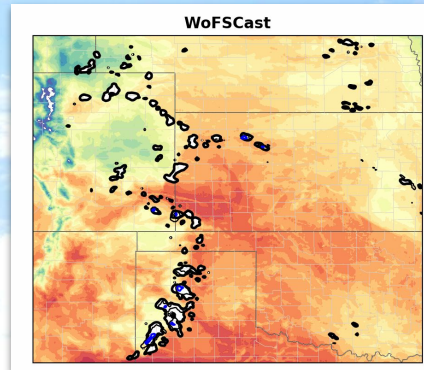

## EAGLE Vision

*Made possible via  
collaboration  
between EPIC, OAR  
labs, NWS*

## High Resolution Regional

## Storm-scale

See talk by Sergey Frolov tomorrow during the Emerging Technologies AI/ML session starting at 3:30pm MT.

# Summary: WoFSCast: Warn-on-Forecast System (WoFS) Emulator

GraphCast-based; 3-km spacing on 900-km domain; 6-h forecasts at 10-min intervals ([Flora and Potvin 2025](#))

WoFSCast ensemble (18 members) performed very well in 2025 HWT Spring Forecasting Experiment

## Ongoing R&D:

Probabilistic loss (CRPS) produces sharper, better-calibrated forecasts

Adding variables (e.g., CAPE, SRH, UH)

Planning MPAS training dataset (3 & 1 km)

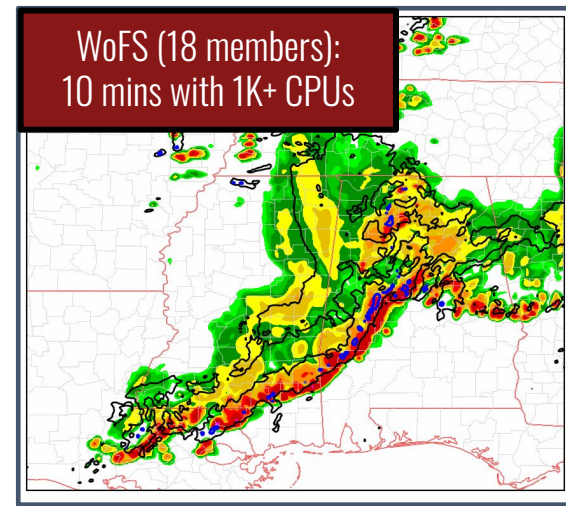

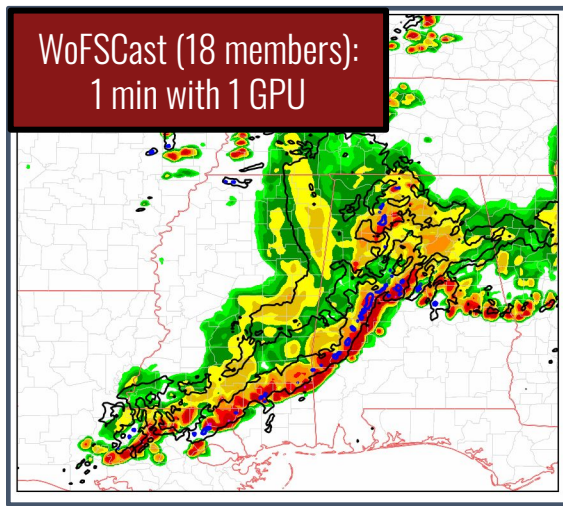

## Longer-term:

1-km MPAS-based WoFSCast

AI-augmented DA

Implement in EAGLE

**Credit: Corey Potvin**

See full presentation by Corey Potvin tomorrow during the Emerging Technologies AI/ML session starting at 3:30pm MT.

# Summary: HRRRCast - High Resolution Rapid Refresh Emulator - Limited Area Part of EAGLE

## V1.0 (Current, Near-Real Time at EMC)

- ResNet-based architecture
- 12 vertical levels
- Focus on Composite Reflectivity (proxy for precipitation)
- Visualization with DESI
- Running in real-time at EMC

## V2.0 (Coming Soon)

- Improved architecture
- 20 vertical levels (+8)
- 11 additional 2D variables, including precipitation
- Ensemble forecasts capability

## HRRRCast manuscript

## HRRRCast real-time Forecasts

# Summary: Data-driven MLWP Development for Global Forecasts

- EAGLE global deterministic (solo) and ensemble v1:
  - Fine-tuning GraphCast using NCEP in-house data and other data sets.
  - Implementation of the EAGLE global solo and ensemble later this calendar year.
- Ongoing development:
  - transitioning to UFS2ARCO/Anemoi framework
  - Updated loss function
  - Increase vertical resolution
  - Generate more forecast products

See the full presentation by Jun Wang in Wednesday's Emerging Technologies session.

Anomaly Correlation Coefficient - G004/Northern Hemisphere 20N-80N  
500 hPa Geopotential Height (gpm)  
valid 05Jun2025-02Sep2025 00Z, init. hours: 00Z

# Transitioning AI Models to Operations

- **Data** - Ensure data quality and efficient management
- **Performance** - Monitor model performance for accuracy
- **Reliable and Secure** - Guarantee system scalability and reliability
- **Forecaster Interpretation** - Provide comprehensive operational training
- **Resources** - Ensuring there are the computational and personnel resources to ensure 24/7 operations

# Transitioning EAGLE to Operations - A new Paradigm

Opportunity to move from legacy waterfall R2O methods and begin adopting a more flexible paradigm

- Decouple the scientific innovation timeline from the release timeline.
- Bring Development and Operations closer together.
- Reduced implementation risks and deliver science quickly.
- Approach is being trialed *now* for EAGLE's first implementation.

## Questions and Community Discussion

Microsoft

Met Office

Brightband

Summary for UFCW of our growing partnerships—not an exhaustive list.

**BACKUP**

# NOAA AI Strategy Rapid Refresh Goals [Draft]

**To ensure NOAA continues to serve the highest quality earth system prediction, resilience, and intelligence information, it is critical for NOAA to rapidly, effectively, and responsibly leverage AI.**

## **AI for NOAA's Mission Delivery**

Use AI to enhance NOAA mission delivery - from weather forecasting to fisheries management, to ocean modeling and space weather prediction.

## **Data Optimization**

Ensure that Earth and space data and information are AI-ready and publicly available as appropriate per regulations, facilitating collaboration with the private sector, academia, and other government agencies.

## **Adaptable IT Framework**

Establish an ecosystem of flexible, scalable, on-demand computing, storage, and software environments that seamlessly integrates AI development and operations, supporting the full range of administrative, business, and scientific workflows.

## **Workforce Proficiency**

Advance AI within NOAA and promote U.S. global AI competitiveness through an AI-proficient workforce.

## **Trustworthy and Ethical**

Secure NOAA's global authority in Earth and space systems through development and use of reliable, robust, and trustworthy AI.
